Data & AI strategy

A prioritized investment roadmap grounded in business needs and delivery readiness.

The business decision

Technology initiatives lack a shared roadmap, clear ownership, or a defined route to implementation. Leaders need a common view of which opportunities matter and what must be in place to deliver them.

Business priorities — Readiness — Investment choices — Roadmap

Engineering and delivery considerations

Evaluate data, architecture, governance, skills, and adoption together. Record value assumptions and dependencies, compare opportunities transparently, and define decision gates for pilots, scale-up, or deferral.

What the engagement delivers

01 Stakeholder discovery and maturity assessment

02 Prioritized use cases and indicative business value

03 Target architecture and governance recommendations

04 Phased roadmap with ownership and dependencies

Artifacts you can use

Maturity assessment; prioritized use-case register; target capability architecture; governance recommendations; phased execution roadmap.

Acceptance and operational readiness

Agreement on prioritized opportunities; Ownership and dependencies made explicit; A practical next phase accepted by stakeholders. Ownership, access, documentation, and support responsibilities are agreed before handover.

Start with: An assessment of one function or a defined enterprise scope.

Scope, schedule, platform costs, and acceptance criteria are agreed during discovery.
