OpenAI, connected data, and management dashboards

Public-sector justice / AI, data & decision visibility

Experience and business relevance

This experience spans an OpenAI implementation, consolidation of data, and management reporting within a public-sector justice environment. AI applications and management reporting both depend on suitable information, clear access boundaries, and validated outputs.

Documented contribution

OpenAI implementation; Data consolidation; Management dashboards.

Business mandate	Information & systems	Delivery scope	Validation & ownership

Design questions for a comparable engagement

01 Which information sources support the target users?

02 How should access follow organizational responsibilities?

03 Which management definitions must be consistent across dashboards?

Proposed delivery path

Confirm the business needs and information boundaries. Assess the selected data sources and application requirements. Design the data, AI, and reporting components. Validate outputs and prepare operational handover.

A concrete starting point

One knowledge domain, an agreed user group, and a pilot assistant. Confirm the sponsor, selected systems and data, access boundaries, and acceptance measures before implementation.
