Leadership across business intelligence, analytics, and data science

On-demand mobility / Departmental leadership

Experience and business relevance

This example reflects leadership across business intelligence, analytics, and data science in an on-demand mobility business. Connecting reporting and data science requires shared business definitions, a consistent data foundation, and clear responsibility for turning outputs into decisions.

Documented contribution

Business intelligence leadership; Analytics leadership; Data science leadership.

Business mandate	Information & systems	Delivery scope	Validation & ownership

Design questions for a comparable engagement

01 Which KPIs require shared definitions?

02 How should reporting and model work be prioritized together?

03 Who owns the business action that follows an analytical output?

Proposed delivery path

Agree business priorities and metric ownership. Review reporting and analytical demand together. Establish reusable definitions and data requirements. Connect validated outputs to business operating routines.

A concrete starting point

One business function and a defined set of reports and KPIs. Confirm the sponsor, selected systems and data, access boundaries, and acceptance measures before implementation.
